

1 Of 4

Abbreviations used on this Safety Data Sheet:

N/av. = Not available, N/ap. = Not applicable, ppm = parts per million, TLV = Threshold Limit Value.

NFPA Hazard Rating: 4-Extreme, 3-High, 2-Moderate, 1-Slight, 0-None, X-Blank

This product is labelled in accordance with regulations administered by the Consumer Product Safety Commission. The typical use pattern and exposure in the workplace is generally not the same as what is experienced by consumers. The requirements of the Globally Harmonized System of Classification and Labelling of Chemicals applicable to this SDS differ from the labelling requirements of the Consumer Product Safety Commission and, as a result, this SDS may contain additional health hazard information not pertinent to consumer use and not found on the consumer product label.

### **GHS** Classification Substance or Mixture

Carcinogenicity	Category 1A - H350i
Specific Target Organ Toxicity - (Repeated Exposure)	Category 1 - H372
Eye Irritant	Category 2A

Label Elements:

Hazard Pictogram

Signal Word: Danger

### Hazard Statements:

H319 - Causes serious eye irritation

H350i - May cause cancer by inhalation.

H372 - May cause damage to organs through prolonged or repeated exposure if inhaled.

### **Precautionary Statements:**

P201 - Obtain special instructions before use.

P202 - Do not handle until all safety precautions have been read and understood.

P260 - Do not breathe dust.

P264 - Wash face, hands and any exposed skin thoroughly after handling.

P270 - Do not eat, drink or smoke when using this product.

P280-Wear protective gloves/protective clothing/eye protection/face protection

P305+P351+P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do - continue rinsing.

P308 + P313 - IF exposed or concerned: Get medical advice/attention.

P314 - Get medical attention/advice if you feel unwell.P337+P313 - IF eye irritation persists: Get medical advice/attention.P405- Store in a safe, secure location.

P501 - Dispose of contents/container in accordance with local regulations.

**SUMMARY:** Prolonged and repeated exposure to excessive concentrations of this product's dust containing respirable size ( $\leq 10 \mu$ ) quartz, or any nuisance dust, can cause chronic pulmonary disease. Dust contact with eyes may cause temporary scratchiness or redness. Long term exposure can cause silicosis. The NTP (National Toxicology Program) and IARC (International Agency for Research on Cancer) has determined that crystalline silica inhaled from occupational sources can cause cancer in humans. Risk of injury is dependent on the duration and level of exposure. A single exposure under normal conditions will not result in serious adverse effects. Citric acid has been classified as an eye irritant. It is considered harmful when in contact with eyes, causing serious irritation. It may be harmful if inhaled, causing respiratory tract irritation. Do not ingest. See section 8 (VIII) for personal protective equipment recommendations.

MEDICAL CONDITIONS WHICH MAY BE AGGRAVATED: Pre-existing upper respiratory and lung disease, such as, but not limited to: Bronchitis, emphysema, and asthma. TARGET ORGAN(S): Lungs, Eyes. See SECTION XI - TOXICOLOGICAL INFORMATION

 $0.05 \text{ mg/m}^3$ 0.025mg/m<sup>3</sup>  $0.025 \text{mg/m}^3$ Crystalline quartz (respirable) n/a Citric Acid None Listed None Listed None Listed n/a EFFECTS OF CHRONIC EXPOSURE TO PRODUCT. Exposure to quantities of crystalline silica respirable dust ( $\leq 10 \mu$ ), in the forms of quartz, cristobalite or tridymite, may occur when in the presence of airborne dust. If the dust concentration levels are in excess of the OSHA Permissible Limit (PEL-TWA 8hrs) of 0.05mg/m<sup>3</sup> or the ACGIH Threshold Limit Value (TLV) of 0.025mg/m<sup>3</sup>, the crystalline silica present is a known cause of silicosis, a progressive, sometimes fatal, lung disease. From the International Agency for Research on Cancer (IARC), a 2012 review of "Silica Dust, Crystalline, in the form of Quartz or Cristobalite" coded Monograph 100C concluded that Crystalline silica in the form of quartz or cristobalite dust is carcinogenic to humans (Group 1). ENGINEERING CONTROLS (SPECIFY, E.G. VENTILATION, ENCLOSED PROCESS) Control within recommended TLV/PEL, mechanical filtration to minimize dust. Refer to ACGIH publication "Industrial Ventilation" or similar publications for design of ventilation systems.
